

**The Division of Pharmacoepidemiology and Pharmacoeconomics of the Department of  
Medicine, Brigham and Women's Hospital  
seeks a faculty member focused on Health Services Research or Healthcare Policy Research  
to join our program.**

Successful applicants will have an interest in medication use and policy, strong quantitative skills, and an ability to conduct independent research and collaborate with other faculty in the Division. Applicants should have doctoral training in health policy, health services research, epidemiology, or economics (e.g., Ph.D., Sc.D.) or a professional degree (e.g., M.D., Pharm.D., J.D.) with additional training in health services research methods (e.g., M.P.H. or M.S.).

We are seeking colleagues interested in conducting grant-funded research focused on prescription drug use and outcomes, pharmacoepidemiology, pharmacoeconomics, drug policy research, drug comparative effectiveness research, or related fields. The most competitive candidates will have experience with methods such as regression, time series analysis, and quasi-experimental approaches. The Division is home to numerous large databases of health care claims and prescriptions to which candidates can apply these methods in studies at the intersection of drug prescribing, outcomes, regulation, and health policy.

The successful candidate will join the Division, including the Program On Regulation, Therapeutics, And Law (PORTAL), one of the most productive non-industry-funded research centers in the U.S. devoted to prescribing and medication. An academic rank of Instructor, Assistant, or Associate Professor at Harvard Medical School will be commensurate with experience, training, and accomplishments. Clinicians may combine this position with part-time patient care. The successful candidate will engage in mentoring trainees in the division and classroom.

Further information about our research programs can be found at [www.DrugEpi.org](http://www.DrugEpi.org).

Please send a c.v. and a cover letter describing your interest to Sebastian Schneeweiss, M.D., Sc.D., Chief, Division of Pharmacoepidemiology and Pharmacoeconomics and Professor of Medicine, Harvard Medical School via e-mail at [lseton@bwh.harvard.edu](mailto:lseton@bwh.harvard.edu).

We are an equal opportunity employer, and all qualified applicants will receive consideration without regard to race, color, religion, sex, sexual orientation, gender identity, national origin, disability status, protected veteran status, or any other characteristic protected by law, gender identity, sexual orientation, pregnancy and pregnancy-related conditions or any other characteristic protected by law.

Women and minority candidates are particularly encouraged to apply.
